

Writings of a Finnish military expert

The 9/11 Operation: A Summary

The 9/11 operation consisted of at least the following:

Military exercises by the North American Aerospace Defense Command (NORAD) with 22 imaginarily hijacked planes on 9/11/2001, before and simultaneously with the 'real' hijackings. Some of the defense interceptors flew to Alaska, as far as possible from the cities that were being attacked.

The 'hijackings' of four civil aircraft and the substitution of all of the planes that really were used on the real flights to remote-controlled ones. It is certain that an operation this complex and heavy in the preparations of the demolitions is not left to be handled by arabs with carpeting knives. Plissken-Valentine or Pearl are well-assumed estimations on how the aircraft operation was performed. Since the part of airplanes hijacked and flown into buildings was critical to the real aims of the operation there must have been a couple of reserve planes for the USAF Boeing 767's and the Global Hawk. Alternatively, the Boeing 757 shot down in Pennsylvania might have been a remote- controlled reserve plane like those.

The booking of seats on certain flights was artificially kept low; those coast-to-coast flights were booked by 20% instead of the usual 75% in order to minimize deaths, which could cause problems. If the flights were real, the passengers on them had to die (or at least disappear). Two of the flights were probably nothing but fictious, real only on radar screens, which minimized the amount of passengers to be murdered.

There was use of put options with airline stocks and with the re-assurance companies related (American Airlines, United Airlines, Allianz, Munchener Re, Schweizer Re, AXA...). Furthermore, the assurance values of the WTC were doubled in July 2001.

The camouflaging of six remote-controlled aircraft in order to make them look like Boeing 767's or 757's. The four planes probably were 2x USAF 767 tankers, a Global Hawk in Pentagon and a 'real' 757 in Pennsylvania.

False tracks leading to 'terrorists' using young moslem looking persons, who take aviation classes in Southern USA and party at night clubs, were created.

The demolition preparations of the wing of the Pentagon that was under reparation. This was supposed to collapse a horseshoe-shaped area of

the building, which would seem to be caused by the crash of a Boeing 757 after the Global Hawk attack. This partly failed. There is photographic evidence of a small plane before the actual collapse of the wing of the Pentagon. The structures did not collapse until firefighters sprayed lots of water on the ceiling of the building.

The demolition preparations of the WTC towers and WTC 7 so that it was possible to make them collapse completely. Also the positioning of an electronic homing device in the towers and in Pentagon in order to ensure the accurate hits of the remote-controlled aircraft. Extra napalm for dramatizing the effects of hits of airliners. The WTC buildings could have been exploded down to earth in same way even completely without the airplanes.

Ordering, preparing and transportation of the charges for the demolition of the WTC. Solely for the steel pillars of the outer circle 40 x 240 charges were needed, let's say 10 000 cutting charges each weighing 50 lbs for each tower. For WTC 7 at least 4000 charges were needed. Also at least one small thermonuclear bomb for each of these three buildings.

The locating of critical targets for the conspiracy in the WTC towers. For example, there was a lot of evidence of world-wide economic crimes. The FBI was in WTC 1 in the floors from 22 to 24. (It has been said that one case was the case against Mobil Oil and James Giffen on illegal oil swaps between Iran and Kazakhstan and the evidence in the investigation of gold price fixing stemming from charges brought against Alan Greenspan, Morgan & Company, Goldman Sachs.) It is possible that some targets were attacked because of the unique opportunity exploitable where the human bodies and all evidence of the crimes automatically disappeared when a hydrogen bomb exploded. Explosions heard from the towers before the commencing of the 'collapse' may have been related to these attacks. There is a reason for the huge explosion in the customs building, as well.

THE DEMOLITION OPERATION OF THE WTC TOWERS

1) One needs to find out the right size and the dimensions of suitable cutting charges and then order 24 000 pieces. One must as well order fitting detonators (detonators were needed a lot more). Fitting detonators usually already exist in stores of military forces (or the CIA). Time of delivery is several months in any case. All detonators must be equipped with some kind of safety mechanism, which will be removed by a radio signal at the final moment.

2) After this, the cutting charges are installed in the selected rooms that are not in use. Some of these rooms may as well serve as temporary storages for charges needed elsewhere. After this the apartment is renovated and circulated to the clients in the WTC. One man continuously

assembles maybe 5 cutting charges per hour. With 10 assemblers 350 charges are installed a day. As surplus transportations of supplies, renovators and guards. Maybe about 20 people more were needed (5 of them know what is going on, 15 do not). For the installation of the charges this operation takes at least four months with 30 men. Considering step 1), six months are probably needed. The amount of personnel could not have been increased, but probably decreased, if more time was available.

3) To some of the chosen apartments, no one had access. That is why on the weekend on 9/8/2001 and 9/9/2001 it is announced, that floors up from the 40th floor are being equipped with cables and no normal employee has access to the working area there. The installations of explosives are completed and at the same time at least in the charged areas listening devices are set to find out a possible premature discovery of the plan. If someone finds charges the guards are soon on the scene and will deal the situation in one way or another.

4) One completes the area of secret service in WTC 7 so that its demolition operation can be carried out. A military flight beacon is placed there (planes are homing to it from far away). Remote controls for air planes and radio transmitters to be capable of blowing up at least one third of the cutting charges are placed. At this location, the ability to eavesdrop any area of the WTC, for example by a laserbeam, aimed to a selected window, probably already existed.

5) A radio beacon helping the final approach is placed in targeted apartments in the WTC towers. Close to these, remote controlled napalm explosives are placed as well, in order to draw the interest from the planes to fires. The higher in the towers the planes are targeted, the less there will be deaths. (Real terrorists would do exactly the opposite.) Evacuation from lower floors should be possible through the staircases. The target is to create a new reason for odd wars and fascistic laws, not to kill as many Americans as possible. 'A new Pearl Harbor', meaning the death of about 3000 citizens is probably the desired loss of lives.

6) The attack plans are made so that they can be executed during the chaos, for example in the offices of the investigations of the economic crimes by the FBI. (The attackers had already their own men infiltrated in these facilities.) Also in WTC 6 (customs) either a small nuke or a very strong bomb is blown out (which one, depends on whether there was melted steel ponds in the cellar of WTC 6.) An explosion, of course, hides the loss of any supplies (A nuclear explosion covers up murders, as well.)

7) In the morning of 9/11 the operations are performed after a timetable in which seconds are important. From the command post facilities the actions in towers are monitored. To hide the true nature of the operation, there was probably an agent on call in both towers, who could silence the people finding out too much. (The agent probably did not know what was going to happen.)

It is not likely that all the people, who knew about the demolition charges in the WTC, or those who installed the remote controls of the aircraft or did some camouflage paintings for drones are still alive and capable of telling about their acts, which changed the world.

8) The mini-nukes are transported to the cellar floors in elevators. After that the elevators are locked down, guarded and monitored - no service repairman will be allowed near these elevators. The thermonuclear device used in WTC 7 was different, its yield was set lower and it was directed in a way better suitable for that building.

9) The explosions have been timed so that 99.9% of people around will look at the top of towers, and perhaps two seconds later the small thermonuclear bomb is exploded in the cellar of the south tower, and again two seconds later another very powerful charge in the WTC 6 customs building while nobody is looking that way. There are also the continuous explosions of the thousands of cutting charges tearing the south tower down at the speed of gravity-driven free fall.

10) The demolition of either of the WTC towers took at least half a year to prepare, including installation of 10 000 cutting charges and the delivery of a thermonuclear device at the last moment. The demolition of those ultra strong steel pillars in the central core using cutting charges only is not possible without waking up unwanted attention. These charges must be in touch of the steel pillars, and there is not enough enclosed space in the central core to hide these biggest possible charges.

11) The demolition operation is finished by destroying WTC 7 using a nuke and completely destroying the op center with its equipment. Concrete evidence like the military flight beacon and the remote control devices for cutting charges and napalm as well as the recordings of eavesdropping devices regarding events within the towers vapourize and vanish without a trace.

SIDE MARKINGS

Most of the media is controlled by people related to the attack and tell misleading stories only, as if crushing of the airliners or a weak fire could have caused the 'collapse' of the towers. The true attackers are the ones with strong and vigorous broadcasting around their false version of the events which is very different to what really happened.

Until these days, no single newspaper, magazine nor a national tv channel in the western nations have taken a critical view on the so-called truth, according to which the planes and fires caused the WTC towers to collapse. The destruction of WTC 7, which has no explanation at all, is bypassed without any comments. A huge bomb, exploded in WTC 6 is

also bypassed as a non-existing event.

Some things, like the sharply-drawn pictures of the closest seismographs may have been falsified. A Specialist in demolitions, V. Romero, may have been forced to change his original statement. The hoax is completed by Osama Bin Laden, who as a CIA agent 'confesses' to have ordered the airliner strikes. The Bin Laden hoax and the suicidal arabs construct a net of lies that catches the most of the mankind.

Laymen have no experience in observing differences in collapses, controlled demolitions and underground nuclear demolitions. Even the destruction of heavy steel constructions or a typical fire damage are far away from their field of experience. These towers were built to take the impacts of hitting Boeing 707's, comparable to Boeing 767's, taking into account the fires caused by the aviation fuel. And the buildings did survive well all that.

The knowledge of relevant advances regarding weapon technology is even rarer. Many of those who are up to date are bound by strict commitment of loyalty – that is vigorously looked after. In some cases, they get executed (an 'accident' occurs).

The author of this text feels as his duty to spread mainly the advanced knowledge in explosives from a military point of view in public discussion as it is obvious that lacking this information the events observed around 9/11 cannot be explained.

The photographs attached in this non-profit distribution are for securing volatile, important evidence on 9/11 for discussion and education.
